Mr. E. Taniguchi
Planning Manager
Sumitomo Aluminum Smelting Co., Ltd.
7-9, Nihonbashi 2-Chome, Chuo-Ku
Tokyo 103, Japan

Dear Mr. Taniguchi:

Re: Extension of Option on Sumitomo Roof Scrubber

In connection with our license agreement with your company dated September 2, 1976 entitling us to modify our Columbia Falls plant with your vertical stud Soderberg technology, you also included a side letter dated August 31, 1976. This provided that after we had modified our plant according to your technology, with an opportunity to assess the performance of the modified plant with regard to fluoride and tar emissions, we could decide whether or not we may want to install a roof scrubbing system of the type you now have on your potrooms. The effective date of the side letter option to license your roof scrubbing is December 31, 1979.

Since it does not seem that we are going to be able to complete the modification of our plant with your technology and test its performance prior to this termination date, we request that the terms of the side letter of August 31, 1976 be extended for two years until December 31, 1981. Accordingly, we have drafted an extension of this agreement for your signature. Two copies are enclosed. You may retain one for your file and return one executed copy for our file.

We might add that we presume to take this action based upon the belief of Mr. Minamiura that he could foresee no problem in obtaining this extension. We thank you for your kind and prompt attention.

Sincerely,

Krest Cyr
Vice President and Chief Counsel
